

Admin Quick Reference Guide

This guide covers all administrative commands and workflows for managing the Tool Signout Bot.

A reference of all commands is available by typing `/adminhelp` in any channel.

Overview

As an admin, you have access to commands for:

- Managing tools and configurations
- Handling reservations and conflicts
- Creating maintenance blocks
- Setting consecutive signout limits
- Managing user roles and permissions
- Reviewing and managing photos
- Clearing photo debts
- Monitoring system health

Admin privileges: All admin commands require the Administrator permission in Discord.

Quick Command Reference

Most Common Admin Tasks

Task	Command
Add a new tool	<code>/admin tool add tool:<name></code>
Block a tool for maintenance	<code>/admin block add tool:<select> time:<range></code>
Clear all reservations	<code>/admin reservation clear</code>
Force return a reservation	<code>/admin reservation forcereurn</code>

Task	Command
Assign tool access to user	<code>/admin role assign user:<name></code>
View photos for approval	<code>/admin photo view tool:<name> username:<user> timerange:<range></code>
Approve a photo	<code>/admin photo approve photo_id:<id></code>
Clear a photo debt	<code>/clearphotodebt user:<name></code>
View outstanding photo debts	<code>/photoaudit</code>
Set consecutive signout limits	<code>/admin limit set max:<int> cooldown:<hours></code>

Tool Management

Adding a New Tool

In any channel:

```
/admin tool add tool:<tool_name> max_hours:<number>
```

Parameters:

- `tool`: Tool name (required)
- `max_hours`: Maximum reservation duration in hours (default: 168)

What happens automatically:

1. Tool is created in the database
2. Discord role is created (e.g., @bandsaw)
3. Role requirement is enabled by default
4. If channel is in "Tool Room" category, photo enforcement is enabled

Example:

```
/admin tool add tool:bandsaw max_hours:4
```

Removing a Tool

/admin tool remove tool:<tool_name>

This will:

- Archive all existing reservations to history
- Delete the tool from active tools
- Keep all historical data

Adjusting Maximum Time

In the tool's signout channel:

/admin tool maxtime hours:<number>

Changes the maximum reservation duration for that tool.

Managing Role Requirements

In the tool's signout channel:

Toggle role requirement on/off:

/admin role toggle

Assign tool access to a user:

/admin role assign user:<username>

Remove user access:

/admin role revoke user:<username>

Sync all tool roles:

/admin role sync

Creates missing roles for all tools in the database.

Admin Blocks (Maintenance Windows)

Admin blocks prevent users from creating reservations during maintenance or special events.

Creating a Block

/admin block add tool:<select> time:<range> force:<true|false>

Parameters:

- **tool**: Select from dropdown. Choose **[All Tools]** to block everything
- **time**: Natural language time range (e.g., "tomorrow 9am to 5pm", "friday all day")
- **force**: If true, cancels conflicting reservations (default: false)

Examples:

/admin block add tool:laser-cutter time:friday 8am to 12pm force:false

/admin block add tool:[All Tools] time:12/25 all day force:true

Behavior:

- Blocks are treated as ADMIN_BLOCK reservations by user "admin-block"
- Cannot overlap with tools currently in use
- If force=true, shortens or cancels conflicting future reservations
- Automatically removed after end time passes

Viewing Active Blocks

/admin block list

Shows all active maintenance blocks across all tools.

Removing a Block

/admin block remove block:<select from dropdown>

Select the block from the autocomplete list and it will be immediately removed.

Managing Reservations

Clear All Reservations

In the tool's signout channel:

/admin reservation clear

Cancels all active reservations for the current tool.

Force Return a Reservation

In the tool's signout channel:

```
/admin reservation forcereurn
```

Immediately returns the first active reservation for the tool without requiring user action.

Adjust Another User's Reservation

```
/adjusttime_admin user:<username> old_time:<time> choice:<start|end|range>  
new_value:<value>
```

Allows you to modify any user's reservation time.

Photo Management

Understanding Photo Requirements

Tool Room Detection:

- Tools in channels under "Tool Room" category require photos
- Start photo: Required when signing out
- Return photo: Required when returning or when reservation expires

Photo Debts:

- START debts: User failed to provide start photo (blocks immediately)
- RETURN debts: User failed to provide return photo (30-minute grace period)

Grace Periods:

- Start photo: 10 minutes after reservation start time
- Return photo: 30 minutes after reservation ends
- After grace period: User is blocked from Tool Room until admin clears debt

View Photos

```
/admin photo view tool:<tool_name> username:<username> timerange:<natural_language>
```

Query photos using natural language time ranges. Photos are sent to you via DM.

Examples:

/admin photo view tool:tracksaw username:mpm2122 timerange:today

/admin photo view tool:welder1 username:john timerange:last week

/admin photo view tool:domino username:jane timerange:december 1 to december 15

/admin photo view tool:laser-cutter username:user timerange:yesterday

What you'll receive:

- DM containing all matching photos
- Each photo shows: tool name, username, type (start/return), timestamp
- Photo ID for approval/rejection
- Embedded image for review

Approve a Photo

After viewing photos via DM:

/admin photo approve photo_id:<id> notes:<optional_notes>

Parameters:

- **photo_id**: The ID shown in the photo DM
- **notes**: Optional admin notes about the approval

Approving a photo does not clear debts automatically. Use **/clearphotodebt** to unblock users.

Reject a Photo

/admin photo reject photo_id:<id> notes:<reason>

Parameters:

- **photo_id**: The ID shown in the photo DM
- **notes**: Reason for rejection (recommended)

Rejected photos remain in the system for audit purposes.

Bulk Approve Photos

/admin photo bulkapprove reservation_id:<id>

Approves all pending photos for a specific reservation. Use when you trust the user's photos without individual review.

View All Outstanding Photo Debts

/photoaudit

Shows up to 10 users with outstanding photo debts:

- Username and tool name
- Debt type (START or RETURN)
- When the debt is due
- Whether grace period is active

View Debts for Specific Tool

/photodebts tool:<tool_name>

Shows all photo debts for a specific tool.

Clear a User's Photo Debt

/clearphotodebt user:<username>

When to use:

- After verifying the missing photo via DM or in person
- After confirming tool condition directly
- To resolve disputes or technical issues

Important: Only admins can clear photo debts. Users cannot clear their own debts to prevent abuse.

Consecutive Signout Limits

Prevent users from monopolizing high-demand tools by limiting consecutive reservations.

How It Works

- User signs out a tool multiple times in a row

- After reaching the limit, they enter a cooldown period
- Counter resets when someone else uses the tool
- Counter also resets after a period of inactivity (24 hours default with minimum total hours)

Setting Limits

In the tool's signout channel:

```
/admin limit set max_consecutive:<number> cooldown_hours:<hours>
reset_after_hours:<hours> min_total_hours:<hours>
```

Parameters:

- **max_consecutive**: Maximum consecutive signouts before cooldown (0 = no limit)
- **cooldown_hours**: Hours user must wait after reaching limit
- **reset_after_hours**: Auto-reset after this many hours of inactivity (default: 24)
- **min_total_hours**: Only reset if total accumulated time is below this (default: 48)

Example:

```
/admin limit set max_consecutive:3 cooldown_hours:24 reset_after_hours:24
min_total_hours:48
```

Users can sign out the tool 3 times in a row, then must wait 24 hours. If they don't sign out for 24 hours AND have less than 48 total hours, their counter resets.

Viewing Current Limits

```
/admin limit view
```

Shows all tools with configured limits and their settings.

Checking Who's in Cooldown

In the tool's signout channel:

```
/admin limit check
```

Lists:

- Users currently in cooldown (with time remaining)
- Users approaching the limit (with their consecutive count)

Clearing a User's Cooldown

In the tool's signout channel:

```
/admin limit clear username:<username>
```

Immediately resets their consecutive count and removes cooldown for the current tool.

User Exemptions

Grant specific users exemption from consecutive signout limits.

Add Exemption

In the tool's signout channel:

```
/admin exempt add username:<username> duration_hours:<hours> reason:<text>
```

Parameters:

- **username**: User to exempt
- **duration_hours**: Hours exemption lasts (omit for permanent)
- **reason**: Optional reason for audit trail

Example:

```
/admin exempt add username:instructor_john duration_hours:720 reason:Teaching course this month
```

Remove Exemption

In the tool's signout channel:

```
/admin exempt remove username:<username>
```

View All Exemptions

In the tool's signout channel:

```
/admin exempt list
```

Shows all users with exemptions for the current tool, including:

- Username
 - Duration (permanent or expiration date)
 - Who granted it
 - Reason
-

Monitoring and Debugging

Test Notifications

/testnotify

Sends a test notification to verify the notification system is working properly.

Daily Summary

/adminsummary

Sends a summary of all active reservations to all admins via DM.

View User Statistics

/mystats user:<username>

Shows detailed statistics for a user:

- Total reservations
- Most used tools
- Average reservation duration
- Recent activity

Debug Logs

View recent logs:

/debug logs tail lines:<number>

Set log level:

/debug logs level level:<CRITICAL|ERROR|WARNING|INFO|DEBUG>

Stream logs to channel:

/debug logs watch enable:<true|false>

Enable to stream logs in real-time to the current channel. Disable to stop streaming.

Common Admin Workflows

Setting Up a New Tool

1. Add the tool:

```
/admin tool add tool:new-tool max_hours:4
```

2. Verify role was created:

- Check server roles for @new-tool

3. Assign initial trained users:

```
/admin role assign user:username1
```

```
/admin role assign user:username2
```

4. Set consecutive limits if high-demand:

```
/admin limit set max_consecutive:3 cooldown_hours:24
```

5. If Tool Room tool, verify photo enforcement is active:

- Sign out the tool
- Confirm photo is required

Scheduling Maintenance

1. Create an admin block:

```
/admin block add tool:laser-cutter time:tomorrow 9am to 11am force:true
```

2. System automatically:

- Cancels conflicting reservations (if force=true)
- Prevents new reservations during maintenance
- Notifies affected users

3. After maintenance, remove block:

`/admin block remove block:<select>`

Managing Photo Debt Issues

1. Check outstanding debts:

`/photoaudit`

2. View user's photos:

`/admin photo view tool:welder1 username:john timerange:last week`

3. Review photos in your DM

4. If photos are acceptable, approve them:

`/admin photo approve photo_id:123 notes:Photo shows proper storage`

5. Clear the debt to unblock user:

`/clearphotodebt user:john`

Handling Unresponsive Users

1. Check if user has active reservation:

`/mystats user:username`

2. Attempt to contact user (DM or mention)

3. If no response, force return:

`/admin reservation forcereturn`

4. Tool is now available for others

Tool Room Channel Setup

1. Create a Discord channel category named "Tool Room" (exact case)
2. Move or create signout channels under that category
3. System automatically detects and enables:

- Photo requirements for signouts
- Photo requirements for returns
- Grace period enforcement
- Photo debt system

No additional configuration required.

Photo System Reference

Photo Requirements by Situation

Immediate Reservations (starting now or within 30 minutes):

- Photo required immediately when signing out
- 10-minute grace period after start time
- Reservation cancelled if no photo after grace period
- START debt created (blocks user immediately)

Future Reservations (starting later than 30 minutes):

- Photo can be sent via DM anytime before start
- Must be sent within 10 minutes after start time
- Reservation cancelled if no photo after grace period
- START debt created (blocks user immediately)

Return Photos:

- Should be provided with `/returntool` command
- Can be sent via DM if forgotten
- 30-minute grace period after reservation ends
- User can clear RETURN debt themselves within grace period
- After grace period: RETURN debt requires admin clearance

Photo Debt Consequences

START Debts (missing start photo):

- User blocked from ALL Tool Room tools immediately
- Cannot be self-cleared
- Requires admin to clear: `/clearphotodebt`

RETURN Debts (missing return photo):

- Within 30 minutes: User can upload photo via DM to self-clear
- After 30 minutes: User blocked from ALL Tool Room tools
- Requires admin to clear: `/clearphotodebt`

Photo Review Process

1. User uploads photo (via command or DM)
 2. Photo stored in database with metadata
 3. Admin reviews using `/admin photo view`
 4. Admin approves or rejects: `/admin photo approve` or `/admin photo reject`
 5. Photos persist permanently in database for audit trail
 6. Approved/rejected status tracked for compliance
-

Tips for Effective Administration

Tool Management:

- Enable role requirements for safety-critical tools (saws, welders, mills)
- Set realistic max_hours based on typical project needs
- Use admin blocks for scheduled maintenance rather than manual clearing
- Sync roles periodically if Discord roles are modified externally

Photo Enforcement:

- Review photo debts regularly using `/photoaudit`
- Clear legitimate debts promptly to avoid user frustration
- Use photo queries to audit compliance over time
- Educate users on grace periods and photo requirements

Access Control:

- Set consecutive limits on high-demand tools (laser cutters, 3D printers)
- Exempt instructors and staff from limits as needed
- Review exemption list periodically to remove outdated entries
- Document exemption reasons for audit trail

Monitoring:

- Run `/adminsummary` daily to stay aware of reservations
- Check `/photoaudit` before leaving for the day

- Use `/mystats` to investigate user behavior issues
- Stream logs during troubleshooting: `/debug logs watch`

User Support:

- Respond to photo debt issues quickly
 - Use force return sparingly (contact user first)
 - Document dispute resolutions
 - Direct users to USER_QUICKSTART.md for self-service help
-

Troubleshooting

Bot Not Responding to Commands

1. Check bot online status in Discord
2. Verify bot has proper permissions in channel
3. Check `/debug logs tail` for errors
4. Contact technical administrator if persistent

Photos Not Being Required

1. Verify channel is under "Tool Room" category (exact case)
2. Check tool configuration: `/admin tool maxtime` (confirms tool exists)
3. Verify tool has `is_tool_room` flag set in database
4. Contact technical administrator if issue persists

User Can't Clear Photo Debt

1. Check if debt is START or RETURN:

`/photoaudit`

2. START debts: Only admin can clear (by design)

3. RETURN debts:

- Within 30 minutes: User uploads photo via DM to self-clear
- After 30 minutes: Only admin can clear

4. Verify photo in system:

`/admin photo view tool:<name> username:<user> timerange:today`

5. If photo exists and is acceptable:

`/clearphotodebt user:<username>`

Consecutive Limit Not Working

1. Verify limit is set:

`/admin limit view`

2. Check if user is exempted:

`/admin exempt list`

3. Verify other users have used tool between reservations (resets counter)

4. Check user stats:

`/mystats user:<username>`

Database or Critical Errors

1. Check logs immediately:

`/debug logs tail lines:100`

2. Do not attempt manual database operations

3. Contact technical administrator with:

- Error messages from logs
- What command was run
- When issue started

4. Document what happened for post-mortem

Command Reference Summary

Tool Management

- `/admin tool add` - Create new tool

- `/admin tool remove` - Delete tool
- `/admin tool maxtime` - Set max reservation duration
- `/admin role toggle` - Enable/disable role requirement
- `/admin role assign` - Give user tool access
- `/admin role revoke` - Remove user tool access
- `/admin role sync` - Create missing tool roles

Reservations

- `/admin reservation clear` - Cancel all reservations
- `/admin reservation forcereturn` - Force return active reservation
- `/adjusttime_admin` - Modify user's reservation time

Admin Blocks

- `/admin block add` - Create maintenance block
- `/admin block remove` - Remove maintenance block
- `/admin block list` - View all active blocks

Photo Management

- `/admin photo view` - Query and view photos
- `/admin photo approve` - Approve a photo
- `/admin photo reject` - Reject a photo
- `/admin photo bulkapprove` - Approve all photos for reservation
- `/photoaudit` - View all outstanding photo debts
- `/photodebts` - View debts for specific tool
- `/clearphotodebt` - Clear user's photo debt

Consecutive Limits

- `/admin limit set` - Configure consecutive signout limits
- `/admin limit view` - View all configured limits
- `/admin limit check` - See who's in cooldown
- `/admin limit clear` - Reset user's cooldown

Exemptions

- `/admin exempt add` - Grant exemption from limits
- `/admin exempt remove` - Remove exemption
- `/admin exempt list` - View all exemptions

Monitoring

- `/testnotify` - Test notification system
 - `/adminsummary` - Daily reservation summary
 - `/mystats` - View user statistics
 - `/debug logs tail` - View recent logs
 - `/debug logs level` - Set log verbosity
 - `/debug logs watch` - Stream logs to channel
-

Getting Help

For Users:

- Direct users to `USER_QUICKSTART.md`
- Basic commands: `/help` in Discord

For Admins:

- This guide covers most admin operations
- `/adminhelp` for admin command reference.
- Technical documentation: `README.md` in `/docs`
- Backend configuration: Contact technical administrator

For Technical Issues:

- Check `/debug logs tail` first
- Review error messages carefully
- Contact technical administrator with specific error details
- Provide context: what command, what time, what happened

For Feature Requests:

- Document the use case clearly
- Discuss with technical team
- Consider workarounds with existing commands
